

Meta Games Coin
(MGC)

WHITEPAPER

1 ABSTRACT:

MetaGamesCoin (MGC)

is the reward token that fuels the RZ Ecosystem a decentralized network of platforms uniting gaming, finance, and community under one digital economy.

Originally created to connect gamers through competition and fair rewards, MGC has evolved into the incentive currency that drives millions of user interactions across the RZ universe.

Unlike speculative assets that rise and fall with market trends, MGC is built on real participation. It powers engagement, creativity, and collaboration across Ranking.Game, CoinMining.Game, CoinRanking.Game, RZ Prime, CoinBank and RZOasis, ensuring that time, effort, and contribution are rewarded with measurable value.

MGC stands as a purpose-driven digital currency:

- born from gaming
- sustained by people
- expanding through decentralization

2

THE RZ ECOSYSTEM:

MGC was the first token ever launched within the RZ ecosystem, marking the genesis of a revolutionary blockchain world.

Born as MetaGamesCoin in 2022, it initially represented gaming innovation, a bridge between entertainment and blockchain rewards. Three years later, MGC has matured into the lifeblood of an ecosystem that connects millions of players, investors, and creators under a shared decentralized infrastructure.

The RZ Ecosystem merges play, creativity, and finance into a unified experience. It consists of several platforms, each contributing to a larger, interconnected economy:

Ranking.Game:

A global platform where gamers compete, climb leaderboards, and earn MGC for their skill, engagement, and influence.

CoinMining.Game:

An interactive staking and mining platform with active user participation.

CoinRanking.Game:

A decentralized ranking and voting engine where users evaluate and compare the top cryptocurrencies and community tokens.

CoinBank:

A non-custodial decentralized investment and banking platform that enables users to manage and invest digital assets directly from their own wallets.

RZPrime:

A decentralized platform for token pre-sales and reservations through smart contracts.

RZClub:

A network of global gaming and social centers where digital interaction meets real-world experience.

RZOasis (Hub):

The decentralized infrastructure that connects all RZ platforms and tokens in a single hub.

Together, these platforms form a living, evolving digital world powered by MGC.

More than just a currency, MGC serves as the engine of participation across all RZ-powered platforms, uniting gaming, creativity, and finance into one open, inclusive ecosystem where everyone can engage, earn, and grow together within a fair, transparent, and decentralized digital economy.

3

THE PROBLEM WE'RE SOLVING

Technology has always been humanity's greatest tool – a bridge between imagination and progress. Yet for decades, it has been shaped and controlled by centralized powers. From industrial machines to social media algorithms, innovation too often served control instead of community. What was once meant to empower people has gradually turned into a system that extracts value from them.

We now live in a world powered by technology, yet increasingly disconnected from humanity. Every day, billions of people create data, content, and value for platforms they do not own. They play, share, build, and spend, yet the rewards flow elsewhere. Users have stopped being participants, they have become the products.

The digital economy that once promised freedom has become a playground for the privileged.

The digital economy that once promised freedom has become a playground for the privileged. Access to opportunity is still determined by geography, wealth, and systemic barriers. Millions of talented gamers, creators, and innovators remain invisible

not because they lack ability, but because they were never given access. Economic background, geography, and social constraints have built invisible walls inside what was supposed

Meanwhile, entertainment and gaming – the universal languages of creativity and joy – have turned into fragmented, corporate-controlled industries. A handful of entities decide who earns, who grows, and who stays behind. Most users, despite their time, energy, and passion, remain detached from the real value they help create.

The RZ Ecosystem, with MetaGamesCoin (MGC) at its heart, seeks to reverse this trend.

In this world, technology serves people again. Blockchain transparency ensures every action is fair, visible, and secure. Gamification restores the human elements of motivation, joy, and creativity. Through MGC, participants no longer play inside closed systems that profit from their data – they engage in a decentralized economy that rewards their presence and performance.

The next era of digital life must be inclusive, transparent, and rewarding

an ecosystem where everyone can play, create, and earn on equal ground. This is the foundation of the **RZ Ecosystem**, and at its core lies **MGC**, the token designed to restore fairness, opportunity, and ownership to the people who make the digital world alive.

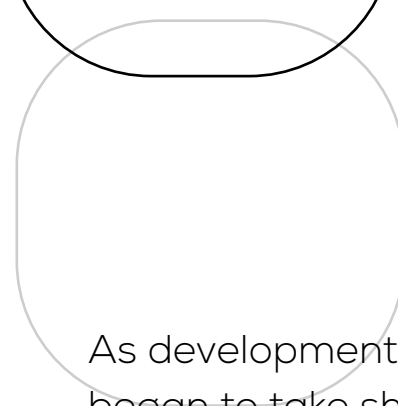

4

THE ORIGIN OF MGC

The idea of MetaGamesCoin (MGC) was born together with the concept of **Ranking.Game:**

a platform designed to redefine how gaming performance and participation are recognized and rewarded.

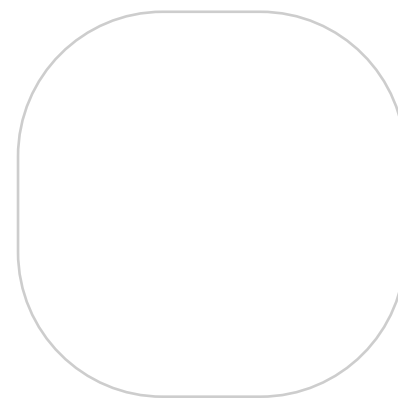

From the very beginning, MGC was envisioned as the native reward token of Ranking.Game, created to give value to players' engagement, achievements, and contributions within the platform.

As development continued, the broader vision of the RZ Ecosystem began to take shape. The same reward logic that powered Ranking, recognizing participation and fair contribution, proved adaptable to other environments.

That's how MGC gradually expanded its purpose:

from being the native token of a single **gaming platform** to becoming a universal reward and incentive token across multiple RZ projects.

Ranking.Game: **The Core Idea Behind MGC**

The concept of Ranking was first introduced as a simple idea: a system that could fairly evaluate and classify players across different types of games. It started as an experimental project outside the blockchain world, focusing on how performance, participation, and reputation could be measured in both digital and physical environments.

Over time, as technology and decentralized systems evolved, the concept was refined and redesigned to become what is now known as **Ranking.Game**:

a decentralized platform built on blockchain principles of transparency, equality, and reward distribution.

Ranking.Game was created to offer a unified space where players, creators, and enthusiasts could showcase their achievements, share experiences, and be recognized for their participation. Its core purpose is not only to rank performance but to turn every user interaction—whether playing, creating, or contributing—into measurable digital value.

From the very beginning of this transformation, **MetaGamesCoin (MGC)** was designed as the native reward token of the platform. MGC gives weight to user actions and creates a fair reward system based on contribution, not central authority or popularity. Every match played, every tournament organized, and every social interaction can translate into real, verifiable value through MGC.

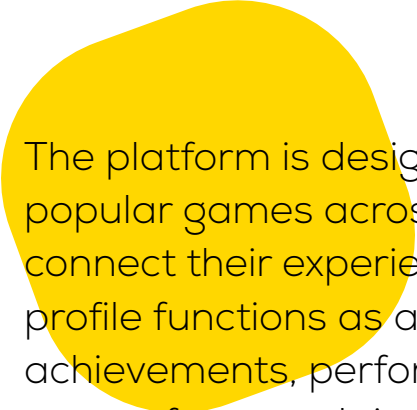

As the idea evolved, Ranking.Game became the foundation of a broader ecosystem—the RZ Ecosystem—extending its core principle across multiple platforms: participation creates ownership.

With this expansion, the vision of Ranking has remained clear:

to build a fair and decentralized environment where everyone, regardless of location or background, can play, rank, and earn within a transparent and interconnected digital economy.

Key Advantages of Ranking.Game

Ranking.Game introduces a comprehensive and inclusive model for modern gaming—one that recognizes every form of play and ensures equal opportunities for all participants. Unlike traditional gaming networks that focus solely on digital competitions or global tournaments, Ranking.Game expands the concept of gaming to include both digital and physical activities, promoting the idea that recreation extends beyond screens and devices.

The platform is designed to accommodate nearly all major and popular games across multiple categories, allowing users to connect their experiences through a unified global profile. This profile functions as a personal gaming identity, recording achievements, performance data, and participation across various types of games. It is seamlessly integrated with blockchain technology, enabling users to manage and withdraw their earned MGC rewards directly to their wallets—instantly and regardless of geographic or economic barriers.

Ranking. Game operates with full transparency. Every score, interaction, and transaction is securely recorded on the blockchain, making the system verifiable and traceable.

The platform applies a zero-fee model, ensuring that users retain the full value of their rewards without deductions or commissions.

Beyond ranking and competition, the platform integrates an active social network that connects all participants within the ecosystem. Players can communicate, form teams, share experiences, and participate in community-driven tournaments or challenges. Event organizers and sponsors can also benefit from specialized tools designed to manage tournaments, engage audiences, and distribute rewards directly in MGC.

By combining inclusivity, transparency, and decentralization, **Ranking.Game establishes a fair and accessible environment for gamers worldwide.**

It eliminates the conventional limitations of geography, entry fees, or exclusive access and instead creates a unified space where participation itself carries value.

In essence, Ranking.Game serves as the foundational layer of a decentralized entertainment ecosystem—where every player, regardless of their background, can connect, compete, and earn in a transparent, reward-driven digital economy.

5

METAGAMESCOIN (MGC) THE TOKEN

5.1

Token Overview and Naming

MetaGamesCoin (MGC) was formed from the combination of three core elements: Meta, Games, and Coin.

The prefix “Meta” originates from the term Metaverse, reflecting the project’s futuristic outlook and its commitment to building decentralized, interconnected platforms that bridge the real and virtual worlds.

“Games” highlights the foundation of the ecosystem the gaming and entertainment industries where creativity, interaction, and competition naturally drive engagement.

Finally, “Coin” represents the financial layer that connects these experiences through blockchain technology, transforming participation into measurable digital value.

Under the RZ Ecosystem, MGC has evolved beyond its initial concept. It now serves as the reward and utility token that powers transactions, incentives, and participation across RZChain and its connected platforms, including Ranking.Game, CoinMining.Game, CoinRanking.Game, RZPrime, and RZ CoinBank.

It symbolizes the fusion of gaming, finance, and decentralized innovation, representing not only a medium of exchange but also the spirit of fair play, creativity, and collaboration that defines the RZ vision.

5.2

Token Utility and Use Cases

MetaGamesCoin (MGC) functions as the primary utility and reward token within the RZ ecosystem.

It was created to give real, measurable value to participation, ensuring that every user's time, skill, and contribution within the ecosystem can translate into a tangible digital asset.

Its key functions include:

● **Reward Mechanism:**

MGC serves as the reward currency for users across all RZ platforms. Players, creators, users and contributors earn tokens based on activity, engagement, and performance metrics defined within each platform.

● **Gaming Economy:**

Within Ranking.Game, MGC acts as the in-game and social incentive, rewarding players for achievements, tournaments, rankings, and community participation. Both winners and participants can earn MGC, reinforcing the principle that contribution matters more than outcome.

● **Staking and Mining:**

Through CoinMining.Game, users can stake or mine tokens, turning passive ownership into active participation while contributing to ecosystem liquidity and stability.

● **Ecosystem Transactions:**

MGC enables frictionless transactions across ecosystem applications.

● **Interoperable Currency:**

As the reward layer of RZChain, MGC connects all RZ platforms, enabling cross-platform functionality and maintaining a consistent reward and transaction model across the ecosystem.

Every action, from gameplay to collaboration, reinforces the sustainability of its economy. In this way, MGC transforms digital participation into a decentralized financial experience, one where engagement itself becomes valuable.

5.3

Tokenomics (Updated 2026)

Following two years of ecosystem evolution, MetaGamesCoin (MGC) has officially transitioned to a deflationary token model aligned with the Binance Smart Chain (BEP20) framework.

Originally launched with a total supply of 100 billion MGC, the ecosystem completed a large-scale burn process that permanently removed %99 of the supply from circulation.

As of 2025, MGC now operates with a fixed and capped supply of 1 billion tokens (%1 of the original total), establishing a transparent, scarcity-driven economic structure with no further minting capability.

This transition ensures long-term value stability, prevents uncontrolled inflation, and aligns MGC's token economy with its real-world utility as a reward and participation asset across RZ platforms.

Token Specifications

Token Name:

Meta Games Coin

Symbol:

MGC

Blockchain:

Binance Smart Chain (BEP20)

Total Supply:

100,000,000,000 MGC

Contract Address:

0xbb73BB2505AC4643d5C0a99c2A1F34B3DfD09D11

Token Distribution

The allocation of MGC is strategically distributed to ensure long-term ecosystem sustainability and growth:

- **Burned:** %99.6994 (99,699,390,810.745451962 MGC)
- **Circulating:** 0.3006% (MGC 300,609,189.2546)

Liquidity and Security

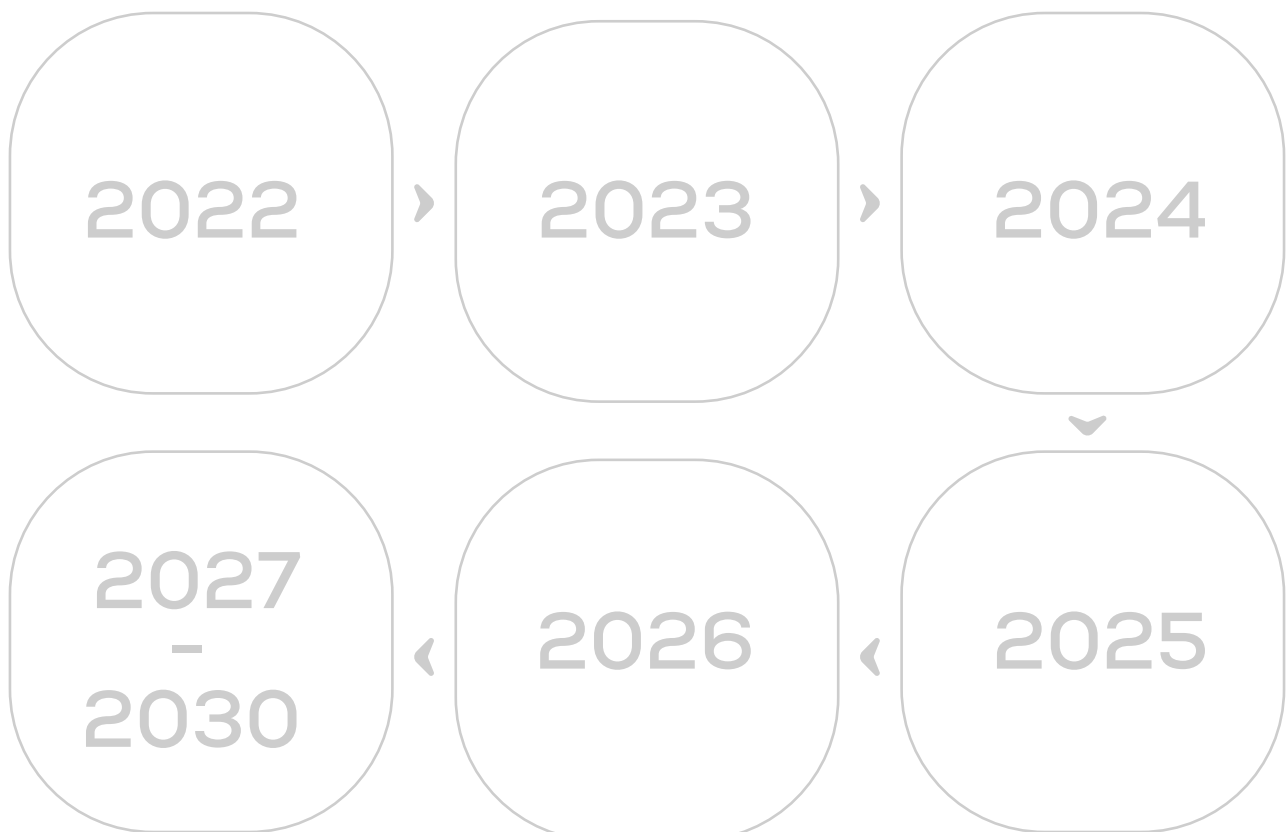

- **Liquidity Guarantee:** To ensure investor confidence and market stability, all liquidity is locked for a period of 201 years via mudra.website.
- **Circulating Supply:** %100 of the non-locked supply is currently in circulation.

6

ROADMAP (2022-2030)

The development journey of MetaGamesCoin (MGC) and the RZ Ecosystem follows a structured, long-term roadmap aimed at sustainable growth, decentralization, and global adoption. Each phase builds on the achievements of the previous one, reflecting the ecosystem's continuous evolution in technology, governance, and real-world integration.

20
22

Genesis Phase

- Launch of **MGC (MetaGamesCoin)**
- Company registration and compliance
- Whitepaper release and ecosystem planning

- Completion of ICO, airdrop, and pre-sale
- Listing on DEX platforms (**PancakeSwap, RZDEX**)
- Establishment of the RZ ecosystem structure
- Launch of prototype versions for **Ranking.Game and CoinMining.Game**

20
23

20
24

Expansion Phase

- Integration of MGC across RZ platforms
- Full ecosystem audit and **%99 token burn**
- Launch of **RZPrime** and **RZ CoinBank** concepts

Activation Phase (Current Year)

- Launch of the new RZ site network
(**CoinBank.Com, CoinMining.Game, CoinRanking.Game, etc.**)
- Implementation of unified user profiles across all platforms
- Adoption of MGC as the **official reward currency**
- Cross-platform reward synchronization
- Integration of **RZDEX API** for dynamic pricing and liquidity
- Beta launch of **RZOasis Hub**

20
25

**20
26**

Integration & Decentralization Phase

- Decentralization of **RZOasis Hub** using IPFS
- Launch of multi-chain bridge between **RZChain, BNB, and Ethereum**
- Expansion of the **RZPrime reservation model**
- Launch of the **RZ Governance Foundation**
- Release of the **RZ Super-App** integrating all RZ services

Global Expansion Phase

- Development of the **RZOasis Metaverse World** (construction begins in 2026, completion by 2030)
- Integration of **AI-driven analytics** and **SocialFi** systems
- Hosting of global **Ranking Tournaments** with MGC-based rewards
- Launch of the **RZ Charity and Sustainability Initiatives**

**2027
-
2030**

GOVERNANCE AND DECENTRALIZATION

From its inception, the RZ Ecosystem has been designed around a single principle: shared ownership.

Every platform, from Ranking.Game to RZOasis, is built to evolve toward a structure where users are not just participants, but stakeholders.

To achieve this, governance within the ecosystem is being developed through the RZ Governance Foundation, a neutral body that ensures transparency, decentralization, and fairness across all operational layers.

The Foundation's role is to oversee cross-platform standards, ecosystem integrity, and the long-term stability of RZChain while preparing the groundwork for full community-led governance.

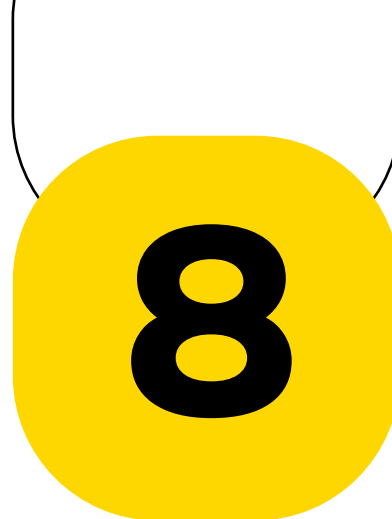

Through this model, holders of MetaGamesCoin (MGC) will gain the right to propose, vote, and influence ecosystem decisions.

This democratic structure ensures that power within the ecosystem is distributed among those who contribute to it, not controlled by any centralized authority.

Decentralization in RZ is not limited to technology, it extends to philosophy.

It means giving every participant, whether a gamer, developer, or investor, an active voice in shaping the digital economy they belong to.

The ultimate goal is a self-sustaining ecosystem governed by its community, where transparency replaces trust, and collaboration replaces control.

SECURITY, COMPLIANCE, AND AUDITS

Security and transparency are central to the MetaGamesCoin (MGC) framework and the broader RZ Ecosystem. Every component has been developed with long-term accountability and compliance in mind, ensuring verifiable and trustworthy operation across all platforms.

The MGC smart contract is fully verified on **BscScan**, confirming its authenticity and immutability on the **Binance Smart Chain (BEP20)** network. Contract ownership has been renounced, , and minting is permanently disabled, guaranteeing that no additional tokens can ever be created beyond the fixed deflationary supply of one billion MGC.

In 2024, the ecosystem executed a complete 99% token burn, transitioning MGC into a fully deflationary model. All remaining tokens are secured through **MudraManager Timelock**, which prevents premature or unauthorized access and maintains predictable token circulation. The smart contract has been audited by InterFi, one of the leading blockchain security firms, confirming the reliability of its burn functions, distribution logic, and user safety mechanisms.

Beyond the technical layer, the RZ team maintains full transparency in compliance and governance, operating under strict blockchain and digital asset standards. Record-keeping, token management, and operational frameworks follow decentralized best practices designed to protect users and ensure ecosystem integrity. In MGC, security is not treated as a feature, it is the foundation of trust that supports every platform within the RZ Ecosystem.

FUTURE VISION & LONG-TERM GOALS

The long-term vision of **MetaGamesCoin (MGC)** extends beyond being a gaming token, it represents the foundation of a new, decentralized entertainment economy. **As the official token of Ranking.Game**, MGC serves a community that unites both professional gamers and everyday people who simply enjoy playing—whether in digital arenas or physical spaces. Ranking.Game acts as the central hub connecting these worlds, while MGC provides the reward and economic backbone that powers it

MGC's ultimate goal is to **become the common currency of the global gaming and entertainment world**, a digital medium that fuels fair rewards, transparent competition, and cross-platform interaction.

Within the broader RZ Ecosystem, MGC bridges gaming, finance, and social engagement, creating a transparent and inclusive environment where participation itself carries value.

As RZChain evolves, MGC will continue to expand its reach across decentralized applications, enabling users to own their achievements, their data, and their economic power.

The integration of AI, SocialFi, and metaverse connectivity will further strengthen this connection, transforming the way people play, earn, and collaborate across digital and real experiences.

MGC began as a native reward token for a single platform, but its mission has grown far beyond that. It now stands as the currency of creativity, interaction, and play—a token built not for speculation, but for people.

The future of MGC belongs to everyone who participates in it, shaping a fairer and more connected world of gaming and

10

FOUNDING VISION & TEAM

At the center of the RZ Ecosystem stands **RZ**, the founder and core architect behind the vision that shaped MetaGamesCoin (MGC) and its interconnected platforms. A technologist with deep roots in systems thinking and digital innovation, RZ was among the earliest adopters of blockchain technology, drawn to its promise of decentralization, fairness, and transparency. His early engagement with Bitcoin and blockchain development helped form the foundation of the ecosystem's guiding philosophy – that technology should serve people, not institutions.

Over the years, RZ has assembled a multidisciplinary team of professionals who share this belief and bring together expertise in blockchain engineering, software development, economics, gaming, and creative design. The RZ Core Team operates under a unified mission: to build transparent, efficient, and rewarding digital systems where participation itself generates value.

Each platform within the ecosystem, including Ranking.Game, RZBank, RZPrime, CoinMining.Game, CoinRanking.Game, and RZOasis, is developed collaboratively, with each division contributing specialized knowledge while maintaining alignment with the shared vision of decentralization and equality.

Together, RZ and his team continue to advance the RZ Ecosystem as a living network of innovation: a place where gaming, finance, and creativity merge under one transparent and community-driven architecture.

RISK FACTORS

While the RZ Ecosystem and MGC token are developed with strong technical and strategic foundations, participants should be aware of potential risks inherent to blockchain-based projects. These may include, but are not limited to, market volatility, regulatory changes, smart contract vulnerabilities, technological limitations, and unforeseen economic events.

MGC's value and adoption depend on broader market conditions, user participation, and continuous ecosystem growth. The RZ team maintains transparency and responsible governance to mitigate risks wherever possible; however, users and investors are advised to exercise due diligence and make independent assessments before engaging with any part of the ecosystem.

12

CONCLUSION

MetaGamesCoin (MGC) was created with a simple yet powerful purpose – to bring fairness, transparency, and real value to participation. What began as the native reward token of Ranking.Game has grown into the financial backbone of an expanding ecosystem that connects gaming, finance, and decentralized innovation under one vision.

The mission of MGC is not to follow trends but to restore balance – giving gamers, creators, and everyday users equal access to opportunities within a transparent economy. As the RZ Ecosystem continues to evolve through RZChain, RZOasis, and other interconnected platforms, MGC will remain the reward layer that unites them all.

**This is not just a token,
it is the currency of engagement:**

built for people, powered by participation, and designed for the next generation of the digital economy.
